Dear Visitors of the Webpage of the Cypriot Society of Podiatrists,

The Cypriot Society of Podiatrists has as a mission to advance Podiatry in Cyprus through public education, information to health practitioners, and upholding professional accountability of members through continual professional development and evidence based practice.

Our association had its 8th General meeting on the 14th of November in Nicosia. It was a great meeting and there was a consensus for our main principle which is the regulation of our profession. We have planned our next steps and we are all working towards them.

The association has been very energetic these last years, taking a very active role for the general education of the public for the prevention and treatment of the diabetic foot and taking part in various activities the Cyprus Diabetic Association has been organizing. We have been leaders in organizing two diabetic foot seminars and we are planning in the next year more activities.

The continual professional development of our members is always upfront on the line and seminars are organized every year during which we invite professors from mainly British Universities to come here for series of lectures. Our association is in a very close relation with the International Organization of Podiatrists and we follow their conferences and educations programs.

They have set the standards for the profession on the European and the International level. There are new projects on the horizon, new themes and new subjects. We are organizing a big campaign for the education of parents for children footwear.

We are closely working with the association of the League against rheumatism in Cyprus, for a series of education lectures for their members.

Diamanto Maliotou

President of the Cypriot Society of Podiatrists
